

HOUSING DIGNITY · MILPITAS HACKS

YNorth

Find your way home.

01

THE CHALLENGE

People don't stay homeless because help doesn't exist — they stay homeless because the **path to it is hidden.**

- ✦ A dozen separate waitlists & forms
- ✦ A Coordinated Entry system nobody explained
- ✦ Offices that don't talk to each other

02 THE IDEA

A north star out of the maze.

NOW The one thing to do today — get to safety, call 211.

SOON Replace the ID, start Coordinated Entry, gather the docs.

HOME The road to a stable place — vouchers, applications, follow-ups.

02

THE IDEA · LIVE

Tell it where you are. Get your path.

Voice intake → personalized path →
“explain this simply” → share with a
caseworker. Multilingual, low-literacy
friendly, calm by design.

02

THE IDEA · DIGNITY BY DESIGN

It cannot lie to you.

- ✦ Never invents a shelter or hotline

Only real, universal U.S. systems — 211, HUD, Vital Records, SSA, 988

- ✦ Your story lives on your device

Nothing on a server. We can't leak what we never hold.

The hardest step is the phone call. So we wrote the script.

READ THIS WHEN YOU CALL — YOU'VE GOT THIS

“Hi, my name is _____. I'm experiencing a housing emergency and I'm hoping you can help.

I'm trying to start Coordinated Entry. Could you tell me what to bring, and what the next step is?”

Why it stands out: removes the invisible barrier — fear — that stops people from getting help. One-tap dial to 211 / 988. Pure **dignity + real-world impact.**

03

THE PROCESS

How we built it — in a day.

Next.js + TypeScript + Tailwind

Gemini 2.5 Flash — path + plain language

Web Speech API — voice intake

Real-resource safety layer — no hallucinated help

On-device learning model

No-key fallback — demo never dies

04

THE IMPACT

We remove the barrier that keeps people stuck.

HOUSING DIGNITY TRACK FIT

Real impact Turns the navigation maze into one clear, ordered path — for the people who need it most.

Tech depth AI hard-constrained to real resources + an on-device model that learns.

Creativity Not a chatbot — a living compass you own, with a call-script and a brain that learns.

05

✦ RECOGNITION & GROWTH · THE NETWORK

A neural network that learns what gets people housed.

YOUR SITUATION

lost my job

facing eviction

have kids

on-device
learning
model

HELP THAT WORKS

free legal aid

rent assistance

family shelter

Why it stands out: every “this helped” is one gradient step — proven resources rise for the next person. It learns across all users: **collective intelligence for getting home.**

From demo to civic infrastructure.

- ✦ Pilot with a 211, city housing dept, or library
- ✦ Verified-resource coverage, city by city
- ✦ More languages + offline kiosk mode for shelters
- ✦ A caseworker dashboard

Our ask: one pilot partner to put YNorth in real hands.

THE VISION

**No one stays lost in the
maze just because they
couldn't find the door.**

YNorth points home.
